

You can type $\mathbb{R}$ by `\mathbb{Character}`, and don't forget to `\usepackage{amssymb}`, for example:

The distributive states that $a(b + c) = ab + ac$ for all $a, b, c \in \mathbb{R}$.

It's easy to type squer brackets `[R]`, but to type curly prackets you have to type backslash (`\`) before each curly bracket, for example :

The set A is defined to be $\{1, 2, 3\}$

Insert the doller sign type `$`.

$2(\frac{1}{x^2-1})$ Oh, the brackets is bad, let's fix them : $2\left(\frac{1}{x^2-1}\right)$

$$2\left[\frac{1}{x^2-1}\right]$$

$$2\left\{\frac{1}{x^2-1}\right\}$$

$$2\left\langle\frac{1}{x^2-1}\right\rangle$$

$$2\left|\frac{1}{x^2-1}\right|$$

$\frac{dx}{dy}\Big|_{x=1}$ Oh, the form of the `|` is short, let's fix it: $\frac{dx}{dy}\Big|_{x=1}$

Tables:

x	1	2	3	4	5
$f(x)$	10	20	30	40	50

x	1	2	3	4	5
$f(x)$	$\frac{1}{2}$	20	30	40	50

Table 1: These values represent the function $f(x)$.

Table 2: The relationship between f and f' .

$f(x)$	$f'(x)$
$x > 0$	The function $f(x)$ is increasing. I will type here a lot of words to make the sentence to long to show you how to fit a paragraph in the cells of the column now I think that's enough. you can edite the width of the column from p{here}.

Arrays:

$$5x^2 - 9 = x + 3 \tag{1}$$

$$5x^2 - x - 12 = 0 \tag{2}$$

$$5x^2 - 9 = x + 3 \tag{3}$$

$$5x^2 - x - 12 = 0 \tag{4}$$

$$5x^2 - 9 = x + 3$$

$$5x^2 - x - 12 = 0$$

$$5x^2\text{place your words here} \tag{5}$$

$$5x^2\text{ place your words here} \tag{6}$$

$$5x^2\text{ place your words here} \tag{7}$$
